Theme Eterm. by [Monkiboi](#)

Providing a theme for Eterm is not compulsory but usually after having gone to the trouble of themeing enlightenment itself it's only a small step to reuse images to create a theme. I'm supplying the complete config file as it's possible the theme may not have an Eterm theme and some that i've seen that do supply one have some options missing. Adjust the values to fit your images.

The paramaters are the same as any other enlightenment theme so you shouldn't have any problems here. Copy and paste into a file called "eterm.cfg" From [the Eterm man page](#) - "By convention and default, Eterm themes should be stored under ~/.Eterm/themes// or /usr/local/share/Eterm/themes/" and can be called with the -t option i.e. # Eterm -t <theme_name>

eterm.cfg

```
