Text Classes. by [Tokyo](#)

Every border for most parts has a `Title_bar`. Just like we have `ImageClasses`, we have `Text_Classes`. We need to define the `text_class/font` for this border:

```
/* TEXT CLASS DEFINITION */

__TCLASS __BGN
__NAME "NEW_BORDER_TEXTCLASS_DEFINITION"
__JUSTIFICATION 1024
__NORMAL "-*-helvetica-*-r-*-10-*-*-*-*-*-*-*"
__DRAWING_EFFECT __EFFECT_NONE
__FORGROUND_COLOR 104 104 104
__BACKGROUND_COLOR 255 255 255
__JUSTIFICATION 1024
__NORMAL_ACTIVE "-*-helvetica-*-r-*-10-*-*-*-*-*-*-*"
__DRAWING_EFFECT __EFFECT_NONE
__FORGROUND_COLOR 255 255 255
__BACKGROUND_COLOR 255 255 255
__END
```

You can use the fonts installed on your System or TrueType fonts. For TrueType fonts, make sure you copy them to your theme's 'ttfonts' directory. Just like `ImageClasses` you can have as many `TextClasses` as you want. Like `ImageClasses`, `TextClasses` have to be unique. We tell Enlightenment about our new `Textclass`:

```
__TCLASS __BGN
We tell Enlightenment the name of this TextClass:
__NAME "NEW_BORDER_TEXTCLASS_DEFINITION"
We tell Enlightenment what JUSTIFICATION to use:
__JUSTIFICATION 1024
```

Justification can either be: 0, 512, 1024

We tell Enlightenment what font to use when the border is INACTIVE:

__NORMAL "-*-helvetica-*-r-*-10-*-*-*-*-*-*"

If you prefer to use a TrueType font use this format:

__NORMAL "helvetica/10"

We tell Enlightenment what drawing effect to use:

__DRAWING_EFFECT __EFFECT_NONE

You can use these effects: SHADOW OUTLINE or NONE

We tell Enlightenment what color to use for the foreground: (HEX TRIPPLET)

__FORGROUND_COLOR 104 104 104

If needed we tell Enlightenment what color to use for the background. Used in Shadow and Outline effects:

__BACKGROUND_COLOR 255 255 255

When the border focus is ACTIVE we tell Enlightenment to use this Justification:

__JUSTIFICATION 1024

We tell Enlightenment what font to use for the ACTIVE state:

__NORMAL_ACTIVE "-*-helvetica-*-r-*-10-*-*-*-*-*-*"

We tell Enlightenment what color to use for the forground:

__FORGROUND_COLOR 255 255 255

We tell Enlightenment what color to use for the background:

__BACKGROUND_COLOR 255 255 255

Just like an Imageclass has to end, a textclass has to have a start and an ending:

__END
